ABOUT ME

Software Engineer focused on AI platforms, backend architecture, and full-stack product development. I build production-ready systems using Python, TypeScript, React, Node.js, REST APIs, automation, and LLM workflows, with hands-on ownership from design to delivery. My work emphasizes scalability, reliability, and product impact, and I am growing toward technical leadership with strong product and business awareness.

EXPERIENCE

Software Engineer Arketic AI — June 2025 - Present

- Architected and built Arketic AI's core enterprise platform end to end, owning backend and LLM flows.
- Designed secure assistant and agent workflows for HR, Finance, IT, and R&D operations.
- Built BI and automation features for KPI reporting, summaries, approvals, and task execution.
- Engineered VPC and on-prem deployments with RBAC, audit trails, and encrypted logging.
- Integrated business systems and team tools for fast rollout without rip-and-replace migrations.
- Acted as the de facto platform owner, shaping architecture, roadmap, and production delivery.

Software Development Intern Exagate — August 2023 - September 2023

- Contributed tofront-enddelivery and Node.js web projects, from design to launch.
- Enhanced UI responsiveness and scalability via optimized React patterns and state.
- Authored process documentation to enable reuse and scale across future projects.
- Collaborated closely with cross-functional teams to ensure seamless project integration.

PROJECTS

HydraQuant (Python & Quant AI)

- Developed an AI-assisted crypto trading platform for research, signal generation, and execution
- Designed decision and risk workflows for signal scoring, position sizing, and trade automation
- Built backend services for scheduling, monitoring, and operational control across the system
- Integrated multi-agent analysis and data pipelines to support faster trading decisions

Yamac-Bezirgan (React & TypeScript)

- Built an interactive portfolio that recreates a desktop operating system in the browser
- Developed a persistent virtual file system for local files, folders, and application state
- Added built-in apps including a PDF viewer, terminal, markdown reader, and GitHub explorer
- Designed responsive desktop and mobile shells for a consistent multi-app user experience

QuirkLLM (Python & Local LLMs)

- Built a local CLI coding assistant as a privacy-focused alternative to cloud developer tools
- Implemented RAM-aware runtime profiles to adapt context, caching, and inference across machines
- Designed interactive terminal workflows for code assistance, file operations, and command execution
- Structured the project as a modular Python system with profiles, modes, and context management

Shiffy (React Native & Node.js & Llama)

- Built a mobile-first shift management platform for managers and part-time employees
- Integrated Llama 3.2 to generate draft schedules from employee availability and manager notes
- Delivered a full-stack MVP with authentication, scheduling, and reporting across Expo, Express, and Supabase

Canny Edge Detection GUI (Python & OpenCV)

- Implemented the Canny edge detection pipeline from scratch to strengthen computer vision fundamentals
- Applied Sobel gradients, non-maximum suppression, double thresholding, and hysteresis step by step
- Built a desktop interface for loading images, tuning blur, and visualizing each stage of the pipeline
- Packaged requirements and usage docs for easy local setup and reproducible runs

EDUCATION

Altınbaş University — 2020 - 2025

B.Sc. in Computer Engineering

Selected Coursework: Data Structures, Algorithms, Artificial Intelligence, Database Systems, Image Processing

Università degli Studi di Milano — 2022 - 2023

Erasmus+ Exchange Program

Focus: Advanced Software Development and Artificial Intelligence

Selected Coursework: Intelligent Systems, Real-Time Graphics Programming, Natural Interaction

SKILLS

- Python
- TypeScript
- JavaScript
- SQL
- React
- React Native
- Node.js
- Express.js
- PostgreSQL
- Supabase
- REST APIs
- OAuth/JWT
- LLM Integration
- RAG
- AI Agents
- Automation
- Docker
- n8n
- Git
- CI/CD
- GitHub Actions

CERTIFICATES & PROGRAMS

- Introduction to Big Data / BTK Akademia
- CEO Career Summit / Youthall
- Preparing to My New Job / Kodluyoruz
- 18.MÜYAK / Endüstri ve Verimlilik Kulübü

HACKATHONS & COMPETITIONS

- Ideathon'25 / 2nd Place
- YTÜ Meta & YTU Llama Hackathon / 6th
- KKB Hackathon / Participant
- AImpact Hackathon / Participant

LANGUAGES

- Turkish — Native
- English — Full Professional Proficiency
- Italian — Elementary Proficiency
- German — Basic Proficiency
